

Moove UK is offering, at a reduced rate, Borescope & Thermography inspection services directly from our specialist engineering team.

Borescope Inspection

Our Field Engineering Support team is dedicated to providing increased productivity and efficiency for all critical assets through their application expertise. Our inspections give the ability to monitor the inside of an asset without opening it up, which reduces operator interaction and equipment downtime.

Thermography Inspection

Our engineers inspect and document the temperature and condition of critical plant equipment and processes. They use inspection and temperature data to locate and eliminate potential problems. This service complements any existing condition monitoring programs, such as oil analysis and vibration measurements, by correlating temperature data with other recorded information.

Application

With this offer, we will work with you to:

- Photograph vital internal components using our borescope equipment.
- Collect thermographic data and record observations on critical equipment.
- Communicate findings to plant personnel on the day of inspection for prompt feedback.
- Present detailed report to plant management and key personnel.

For more information on our limited time offer, contact our specialist engineers on DLE@uk.moovelub.com or visit www.moovelub.co.uk/contact.html
